

Richard Huntrods is a professional engineer who has been teaching computer programming with third generation languages since the early 1990's. After moving from the classroom to the on-line world in 2000, Richard has sought to improve the distance learning experience, especially as it relates to learning a computer language.

Richard Huntrods graduated in Engineering in 1980 and received his master's degree in Engineering in 1988. Since that time he has worked as a Software Engineer for various companies in Alberta, eventually starting his own consulting practice in 1986. In addition to his consulting work, Richard has been teaching Computer Science courses since the early 1990s. In 2000, Richard started teaching for Athabasca University, where he is currently a full-time Academic Coordinator.
